

# RUBBER FLOOR MATS

**Protect Your Plant From Tracking of Dangerous Materials, Prevent Employee Slipping, and Prevent Fatigue in Workers.**

Rubber Floor Mats are a great preventative measure for UV ink and coating spill management. Using the correct floor covering in the workplace can help prevent shoe sole contamination and tracking. Use them by equipment to prevent UV materials from being tracked around the plant. You can also place them near your entrance to keep dirt and other trackable messes out of the workplace.

Rubber Floor Mats also offer superb cushioning and support for employees. This increase in employee comfort can even boost overall performance! With their durable and lasting surface, rubber mats provide excellent value and quality. Rubber Floor Mats will not react to the inks, coatings, or solvents typically used for shop clean-up. And their coated rubber top provides easy clean-up of spilled materials.
